I. INTRODUCTION

A. RISK FACTORS

1. Standard Risk Factors

- a. Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the Fund's objective will be achieved.
- b. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of investment in the scheme may go up or down.
- c. Past performance of the Sponsor / AMC / Mutual Fund or its affiliates does not indicate the future performance of the scheme(s) of the Mutual Fund.
- d. State Bank of India, the sponsor, is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution made by it of an amount of Rs. 5 lakhs towards setting up of the mutual fund.
- e. SBI Small Cap Fund is only the name of the scheme and does not, in any manner, indicate either the quality of the scheme or its future prospects and returns.
- f. The NAV of the Schemes' Units may be affected by change in the general market conditions, factors and forces affecting capital markets in particular, level of interest rates, various market related factors and trading volumes.
- g. The present scheme is not a guaranteed or assured return scheme.
- h. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.

2. Scheme-specific Risk Factors

(a) Risks associated with investing in equity and equity related securities

Investments in equity and equity related securities involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, if there is a subsequent decline in the value of the securities held in the Scheme's portfolio.

The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of divestment.

(b) Risks associated with investing in debt securities

(i) Interest rate risk

Investments in debt securities are subject to interest rate risk as changes in interest rates may affect the NAV(s) of the Scheme(s). The price of a fixed income instrument falls when the interest rates move up and vice-a-versa. The effect is more pronounced when the duration of the instrument is higher. Hence, the NAV movement of the Scheme(s) consisting of predominantly fixed income securities is likely to have inverse correlation with the movement in interest rates. In case of a floating rate instrument, this risk is lower as a result of periodic reset of the coupon.

(ii) Credit risk

This refers to the inability of the issuer of the debt security to make timely payments of principal and/or interest due. It is reflected in the credit rating of the issuer. Hence if the credit rating of the issuer is downgraded, the price of the security will suffer a loss and the NAV will fall. Credit risk factors pertaining to lower rated securities also apply to lower rated zero coupon and deferred interest kind bonds. Lower rated zero coupon and deferred interest kind bonds carry an additional risk in that, unlike bonds that pay interest through the period of maturity, the Scheme(s) by investing in these bonds will realize no cash till the cash payment date and if the issuer defaults, the Scheme(s) may obtain no return on its investment.

(iii) Price risk

As long as the Scheme(s) is invested, the instruments are subject to daily price fluctuations. These fluctuations may be due to instrument specific factors as well as macro-economic conditions.

(iv) Spread risk

Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV(s) of the Scheme(s). Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV could fall.

(v) Liquidity risk

This represents the possibility that the realised price from selling the security might be lesser than the valuation price as a result of illiquid market. If a large outflow from the Scheme(s) is funded by selling some of the illiquid securities, the NAV(s) could fall even if there is no change in interest rates. Illiquid securities are typically quoted at a higher yield than the liquid securities and have higher bid offer spreads. Investment in illiquid securities results in higher current yield for the portfolio. Liquidity risk is a characteristic of the Indian fixed income market today.

The inability to sell securities held in the Scheme's portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may choose to invest in unlisted securities.

(vi) Reinvestment risk

This is associated with the fact that the intermediate cash flows (coupons, prepayment of principal in case of securitised transactions or principal payment in case a security gets called or repurchased) may not be reinvested at the same yield as assumed in the original calculations. In case of securitised debt, changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors but may have an impact on the re-investment of the periodic cash flows that an investor receives on securitised papers.

(vii) Settlement risk

Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme(s) are uninvested and no return is earned thereon. The inability of the Scheme(s) to make intended securities purchases, due to settlement problems, could cause the Scheme(s) to miss certain investment opportunities.

(viii) Market risk

Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

(ix) Pre-payment risk

Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. In the event of pre-payment of the underlying debt, investors may be exposed to changes in tenor and yield.

(C) Risks associated with investing in money market instruments

- (i) Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's inability to meet the principal payments. Additionally, money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.
- (ii) Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments. The AMC endeavours to manage such risk through the use of in-house credit analysis and credit ratings given by recognized rating agencies such as CRISIL, ICRA, FITCH, CARE, etc.
- (iii) The NAV of the Scheme's Units, to the extent that the Scheme(s) is invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

(d) Risks associated with investing in Securitised Debt

- (i) The Scheme may be exposed to risks associated with investing in asset backed securities (ABS), i.e. securitised debt. The underlying assets in the case of investment in securitised debt could be mortgages [being mortgage backed securities (MBS)] or other assets like credit card receivables, automobile / vehicle, consumer durables, personal, commercial or corporate loans and any other receivables, loans or debt.
- (ii) Different types of securitised debt/structured instruments carry different levels and types of risks and the NAV(s) of the Scheme may, to the extent that its assets are invested in such instruments, fluctuate depending on the value of such instruments. For instance, credit risk on securitised bonds depends upon the credit worthiness of the originator and would vary depending on whether such bonds are issued with recourse to the originator or otherwise (a structure with recourse will have a lower credit risk than a structure without recourse). Even within securitised debt, AAA rated securitised debt offers lesser risk of default than AA rated securitised debt. Changes in/withdrawal of the credit rating of the instruments issued by the originator may affect the value of the Scheme's investments and consequently, the NAV of the Units.
- (iii) Underlying assets in securitised debt may assume different forms and the general types of receivables include Auto Finance, Credit Cards, Personal Loans/Receivables, Home Loans/Receivables, Corporate Loans/Receivables and other retail loans. Credit risks relating to these types of receivables depend upon various factors including macro economic factors impacting each of these industries. Specific factors like nature and adequacy of property

mortgaged against these borrowings and the nature of loan agreement / mortgage deed in case of Home Loans, adequacy of documentation in case of Auto Finance and Home Loans, capacity of the borrower to meet its obligations in case of Credit Cards and intentions of the borrower influence the risks relating to the asset borrowings underlying the securitised debt.

- (iv) If a court/regulatory authority concludes that the sale from the originator to the securitisation trust was not a “true sale”, the Scheme(s) may, in the event that it has invested in instruments issued by such trust, experience losses or delays in the payments due and the NAV of the Units may be affected thereby. Care is generally taken while structuring the transaction so as to minimize the risk of the sale to the trust not being construed as a “true sale” and legal opinion confirming that the sale constitutes a true sale is usually obtained.
- (v) Presently, the secondary market for securitised papers is not very liquid and there is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the Scheme(s) to resell such securities. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.
- (vi) In case of securitised debt, changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors but may have an impact on the re-investment of the periodic cash flows that an investor receives on securitised papers.
- (vii) Securitised debt papers carry credit risk of the obligors and are dependent on the servicing of the Pass Through Certificates, contributions, etc. However, these are offset suitably by appropriate pool selection as well as credit enhancements specified by Credit Rating Agencies. However, the credit enhancement stipulated in a securitization transaction represents a limited loss cover only. Delinquencies and credit losses may cause depletion of the amount available under the cash collateral account and thereby the scheduled payouts of the investors may get affected if the amount available in the cash collateral account is not enough to cover the shortfall. In cases where the underlying facilities are linked to benchmark rates, the securitized debt papers may be adversely impacted by adverse movements in benchmark rates. However, this risk is mitigated to an extent by appropriate credit enhancement specified by Credit Rating Agencies.

Risk of Co-mingling

The servicers normally deposit all payments received from the obligors into the collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the loan agreements may not be segregated from other funds of the servicer. If the servicer fails to remit such funds due to investors, the investors may be exposed to a potential loss. Due care is normally taken to ensure that the servicer enjoys highest credit rating on stand alone basis to minimize co-mingling risk.

(e) Risks associated with short selling and securities lending

- i) **Risks associated with short selling:** The Scheme(s) may enter into short selling transactions, subject to SEBI and RBI regulations in the matter. This will be done if the fund management team is of the view that there exists an opportunity to make trading gains. Short positions carry the risk of losing money and these losses may grow unlimited if the price of the stock increases without any limit. This may result in major loss to the Scheme(s). At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or

impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

- ii) **Risk associated with securities lending:** The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme(s) and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

(f) Risks associated with investing in Foreign Securities

Subject to necessary approvals and within the investment objectives of the Scheme(s), the Scheme(s) may invest in Foreign Securities including foreign equities, ADRs, GDRs, mutual funds and exchange traded funds, unlisted securities, government securities, corporate debt securities, money market instruments, repos not involving borrowing and short term deposits with overseas banks. Such investments carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.

It is the AMC's belief that investment in Foreign Securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme(s) would invest only partially in Foreign Securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme(s).

Overseas investments will be made subject to any/all approvals, conditions thereof as may be stipulated under the SEBI Regulations or by RBI and provided such investments do not result in expenses to the Scheme(s) in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Mutual Fund may, where necessary, appoint other intermediaries of repute as advisors, custodian/sub-custodians, etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses.

To the extent that the assets of the Scheme(s) will be invested in Foreign Securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

(g) Risks associated with investing in derivatives

- (i) Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. Derivative products are highly leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund

manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

- (ii) The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- (iii) As and when the Scheme(s) trades in derivative products, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to manage the risks as a result of the possible failure of the counterparty to comply with the terms of the derivative contract.
- (iv) Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:
 - Credit Risk – this occurs when a counterparty defaults on a transaction before settlement and therefore, the Scheme(s) is compelled to negotiate with another counter party, at the then prevailing (possibly unfavourable) market price, in order to maintain the validity of the hedge.
 - Market Liquidity Risk - where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
 - Model Risk - the risk of mis-pricing or improper valuation of derivatives.
 - Basis Risk - which arises when the instrument used as a hedge does not match the movement in the instrument/underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.
- (v) The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values.

(h) Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non guaranteed basis. Credit risks could arise if the counterparty does not return the security as contracted on due date. The liquidation of underlying bonds in case of counterparty default would depend on the liquidity of the bond and market conditions at that time. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

(i) RISK FACTORS ASSOCIATED WITH INVESTMENTS IN REITs AND InvITs:

Risk of lower than expected distributions: The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate primarily based on the below, among other things:

- success and economic viability of tenants and off-takers
- economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets

- force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- debt service requirements and other liabilities of the portfolio assets
- fluctuations in the working capital needs of the portfolio assets
- ability of portfolio assets to borrow funds and access capital markets
- changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
- amount and timing of capital expenditures on portfolio assets
- insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents
- taxation and other regulatory factors

Price-Risk: The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets

Interest-Rate Risk: Generally, there would be an inverse relationship between the interest rates and the price of units. Generally, when the interest rates rise, prices of units fall and when interest rates drop, such prices increase.

Liquidity Risk: This refers to the ease with which REIT/InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be times when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

B. RISK CONTROL STRATEGIES:

Investments in equity and equity related securities, debt and Money Market Instruments shall carry various risks such as inability to sell securities, trading volumes and settlement periods, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification. In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds as well as equities. If interest rates rise the prices of bonds fall and vice versa. Equity might be negatively affected as well in a rising interest rate environment. A well-diversified portfolio may help to mitigate this risk.

Further, the Investment Manager endeavours to invest in REITs/InvITs, where adequate due diligence and research has been performed by the Investment Manager. The Investment Manager also relies on their own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, etc.

CREDIT EVALUATION POLICY & DUE DILIGENCE FOR CREDIT RISK

CREDIT EVALUATION POLICY

Credit Analysis is a bottom up approach starting with looking at each individual issuer, industry, terms and covenants of a particular issue, etc. Individual issuer level exposures are taken only after approval from investment committee, i.e. issuer becoming part of "Accepted Credit Universe". A team of credit analyst will do a detailed analysis and prepare an initiation note to introduce an issuer to the universe.

For every issuer we focus on 4 Cs of credit

- Capacity
- Character
- Collateral
- Covenants

Key focus areas are

- Management Quality
- Financial Analysis
- Business Analysis
- Industry Analysis
- Regulatory Environment
- Feedback from Creditors
- Other Issues; auditor report and qualifications, etc

Regular management interaction at various levels, supported by plant visits, interaction with rating agencies is part of the process.

Once a credit limit is set, it is regularly monitored based on internal Tier classification.

DUE DILIGENCE FOR CREDIT RISK

While carrying out due diligence for credit risk, following parameters/attributes are analysed:

- **Management Quality** – It includes assessment of management quality, reviewing promoter background and track record, performance of group companies and possibility of group support, internal control systems, succession plans & repayment track record including that of other companies in the group.
- **Financial Analysis** – It includes analysis of Balance sheet, Profit and Loss account, and cash flow statement. Ratio analysis for the past years including quarterly/half yearly results analysis wherever available. Different set of ratios are analysed for corporates, banks, NBFCs etc.
- **Business Analysis** – It includes understanding of competitive position and competitor analysis on key parameters, strategies for growth, technical and marketing skill set, manufacturing process, productivity details and future expansion plans.

F.DISCLOSURE REQUIREMENTS FOR SECURITIZED DEBT

Risk profile of securitized debt vis-a-vis risk appetite of the scheme

The risk of investing in securitized debt is similar to investing in debt securities. However it differs from other debt securities in two ways:

- **Liquidity:** Typically the liquidity of securitized debt is less than similar debt securities.
- **Pre-payment:** For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Policy relating to originators:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, SBI MF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:

- Outlook for the economy (domestic and global)
- Outlook for the industry
- Originator/Pool specific factors

For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments

Risk mitigation strategies:

Risk mitigation strategies will depend on each asset class, whether they are unsecured loans or secured, seasoning, collection history, past recovery rates, originator's financial profile, servicing performance, etc for each asset class. SBI MF will invest in pools with investment grade rating by SEBI recognised rating agencies. In addition some specific risk mitigation measures will include

Risk	Mitigants
Credit Risk	Analysis of originator with respect to past track record, systems and processes, performance of pools, collateral adequacy and disclosure frequency; Analysis of specific pool with respect to nature of underlying asset, seasoning, loan sizes, loan to value ratio, geographical diversity, etc
Counterparty Risk	Past track record of handling securitized transactions, disclosure adequacy and frequency
Legal Risk	Check with rating agency that investors' interest is not compromised, specific protection measures like bankruptcy remoteness, etc are built in separate in-house legal opinion on transactions,
Market Risk	Liquidity, Prepayment and Interest Rate Risk Analysis and level of their mitigation through transaction structure and credit enhancements provided

The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheeler s	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	60-120 months	12-48 months	12-48 months	12-24 months	12 months	12-36 months	NA	NA
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA
Average Loan to Value Ratio	Less than 90%	Less than 90%	Less than 90%	Less than 90%	NA	NA	NA	NA
Average seasoning of the Pool	6-12 months	3-6 months	3-6 months	3-6 months	3-12 weeks	1-3 months	0-3 months	NA
Maximum single exposure range	3-4%	3-4%	Retail	Retail	Retail	Retail	NA	NA
Average single exposure range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors. The investment committee will review the above guidelines considering the extant RBI guidelines pertaining to securitization.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- ⇒ Average original maturity of the pool: based on different asset classes and current market practices
- ⇒ Collateral margin including cash collateral and other credit enhancements
- ⇒ Loan to Value Ratio
- ⇒ Average seasoning of the pool, which is a key indicator of past pool performance
- ⇒ Default rate distribution
- ⇒ Geographical Distribution
- ⇒ Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency

Minimum retention period of the debt by originator prior to securitization:

The scheme shall invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

Minimum retention percentage by originator of debts to be securitized

The scheme shall invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date

The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the Scheme in any asset are done based on the requirements of the Scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest.

The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

As with any other debt instruments, investment in securitized debt instruments will be closely monitored by a dedicated team of credit analysts, ratings of any such instruments will be continuously tracked and periodic performance report from Trustee and MIS from Originators, if any would be scrutinized closely

G. STOCK LENDING

The scheme may also engage in stock lending. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period. The Fund may in future carry out stock-lending activity in the scheme, in order to augment its income. Stock lending may involve risk of default on part of the borrower. However, this risk will be substantially reduced as the Fund has opted for the "Principal Lender Scheme of Stock Lending", where entire risk of borrower's default rests with approved intermediary and not with the Fund. There may also be risks associated with Stock Lending such as liquidity and other market risks. Any

stock lending done by the scheme shall be in accordance with any Regulations or guidelines regarding the same. The AMC will apply the following limits, if it desire to engage in Stock Lending:

- (a) Not more than 20% of the net assets can generally be deployed in Stock Lending
- (b) Not more than 5% of the net assets can generally be deployed in Stock Lending to any single intermediary.

H. DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Portfolio Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks), Treasury Bills (issued by RBI) and the Triparty Repo.

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the Gsec markets and the overnight repo and Triparty Repo are guaranteed and done by a central counterparty, the Clearing corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on March 31, 2023

Instruments	Indicative yield range
Overnight rates	6.25-6.50%
90 day Commercial Paper	7.10-7.20%
91-day T-bill	6.80-6.90%
1 year G-Sec	7.15-7.20%
5 year G – Sec	7.15-7.20%
10 year G-Sec	7.25-7.30%
1 year AAA Bond	7.65-7.75%
5 year AAA Bond	7.60-65%

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.

I. TRADING IN DERIVATIVES

The Fund's trading in derivatives would be in line that is permitted by SEBI Regulations from time to time. The Fund may use any hedging techniques that are permissible now or in future, under SEBI regulations, in consonance with the scheme's investment objective, including investment in derivatives such as interest rate swaps. The Fund shall fully cover its position in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market. The Fund shall maintain separate records for holding the cash and cash equivalents / securities for this purpose. The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all times.

SEBI has also vide circular DNPd/Cir-29/2005 dated 14th September 2005 permitted Mutual Funds to participate in the derivatives market at par with Foreign Portfolio Investors (FPIs). Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts.

I. Position Limit

The position limits for the Mutual Fund and its schemes, for transaction in derivatives segment are in compliance to the SEBI Circular no. SEBI/DNPd/Cir-31/2006 dated September 22, 2006, and to all such amendments as applicable from time to time. The position limits are given as under:

i. Position limit for the Mutual Fund in index options contracts

The Mutual Fund position limits in index option contracts **on a particular underlying index shall be higher of:**

- a. Rs. 500 Crore; or
- b. 15% of the total open interest in the market in index options contracts.

This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for the Mutual Fund in index futures contracts:

The Mutual Fund position limits in index futures contracts **on a particular underlying index shall be higher of:**

- a. Rs. 500 Crore; or
- b. 15% of the total open interest in the market in index futures contracts.

This limit would be applicable on open positions in all futures contracts on a particular underlying index.

iii. Additional position limit for hedging

In addition to the position limits at point (i) and (ii) above, the Mutual Fund may take exposure in index Derivatives subject to the following limits:

1. Short positions in index derivatives (short futures, short calls and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
2. Long positions in index derivatives (long futures, long calls and short puts) shall not exceed (in notional value) the Mutual Fund's holding of cash, government securities, T-Bills and similar instruments.

iv. Position limit for Mutual Funds for stock based derivative contracts

The combined futures and options position limit shall be 20% of the applicable Market Wide Position Limit (MWPL) (as per SEBI Circular no. SEBI/HO/MRD/DP/CIR/P/2016/143 dated December 27, 2016).

v. Position limit for each scheme of a Mutual Fund

The scheme-wise position limit / disclosure requirements shall be –

1. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of:

1% of the free float market capitalization (in terms of number of shares).

Or

5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

2. This position limits shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.

Illustrations

i. Arbitrage:

Buy 1000 stocks of Company A at Rs 100 and sell the equivalent of stocks future of the Company A at Rs 101.

1. Market goes up and the stock end at Rs 150.

At the end of the month the future expires automatically:

At the settlement date we assume that future price = closing spot price = Rs 150

a. Gain on stock is $1000 \times (150 - 100) = \text{Rs } 50000$

b. Loss on future is $1000 \times (101 - 150) = \text{Rs } - 49000$

c. Then gain realized is $50\,000 - 49\,000 = \text{Rs } 1000$

2. Market goes down and the stock end at Rs 50.

At the end of the month the future expires automatically:

At the settlement date we assume that future price = closing spot price = Rs 50

a. Loss on stock is $1000 \times (50 - 100) = \text{Rs } - 50000$

b. Gain on future is $1000 \times (101 - 50) = \text{Rs } 51000$

Then gain realized is $51000 - 50000 = \text{Rs } 1000$

ii. Unwinding an arbitrage position:

Buy 1000 stocks of Company A at Rs 100 and sell the equivalent of stocks future of the Company A at Rs 101.

The market goes up and at some point of time during the month the stock trades at Rs 150 and the future trades at Rs 149 then we unwind the position:

1. Buy back the future at Rs 149 : loss incurred is $(101 - 149) \times 1000 = \text{Rs } - 48\,000$
2. Sell the stock at Rs 150 : gain realized : $(150 - 100) \times 1000 = \text{Rs } 50\,000$
3. Net gain is $50\,000 - 48\,000 = \text{Rs } 2\,000$

iii. Roll over the futures:

In this case we keep the underlying stock position intact and roll over the futures position into next month. For example, if the underlying stock is trading around Rs 150 on or closer to the expiry date, the stock future is also generally likely to trade closer to similar levels. In such a case, if the next month futures are trading at levels higher than the current month futures, we roll over the future position to the next month (i.e. instead of letting the current month future expire (on expiry day), we buyback the current month future and sell the next month future in its place, keeping the underlying stock position unchanged):

- a. Stock future next month is at Rs 151
- b. Stock future actual month is at Rs 150
- c. Then sell future next month at Rs 151 and buy back actual future at Rs 150 $\Rightarrow$ gain of $1000 \times (151 - 150) = \text{Rs } 1000$ and the arbitrage is continuing.

In case, the future price trades at discount to spot price (any time during the period till the expiry date) then the original position will be squared by buying the future and selling the spot market position.

Debt Derivatives

The Scheme may use derivatives instruments like Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing and as may be permitted under the Regulations and guidelines.

Interest Rate Swaps

Interest rate swap is a strategy in which one party exchanges a stream of interest for another party's stream. Interest rate swaps are normally 'fixed against floating', but can also be 'fixed against fixed' or 'floating against floating' rate swaps. Interest rate swaps will be used to take advantage of interest-rate fluctuations, by swapping fixed-rate obligations for floating rate obligations, or swapping floating rate obligations to fixed-rate obligations. A floating-to-fixed swap increases the certainty of an issuer's future obligations. Swapping from fixed-to-floating rate may save the issuer money if interest rates decline. Swapping allows issuers to revise their debt profile to take advantage of current or expected future market conditions..

Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

i) Advantages of Derivatives

The volatility in Indian debt markets has increased over last few months. Derivatives provide unique flexibility to the Scheme to hedge part of their portfolio. Some of the advantages of specific derivatives are as under:

ii) Interest Rate Swaps and Forward rate Agreements

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rates by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

v. Illustration: Interest Rate Swap (IRS)

Assume that a Mutual Fund has INR 10 crore, which is to be deployed in overnight products for 7 days. This money will be exposed to interest rate risk on daily basis. The fund can buy an Interest Rate Swap receiving fixed interest rate and paying NSE MIBOR.

The deal will be as under:

The cash flows on a notional principal amount of Rs. 10 crores would be-

(R. in Crore)

	Principal	NSE MIBOR	Interest	Amount	
Day 1		10.0000	8.10%	.0022192	10.00221918
Day 2		10.00222	8.20%	.0022466	10.00446575
Day 3		10.00447	8.30%	.002274	10.00673973
Day 4 (for 2 days)	Saturday	10.00674	8.15%	.0044658	10.01120548
Day 5	Sunday		Holiday		
Day 6		10.01121	8.40%	.0023014	10.01350685
Day 7		10.01351	8.50%	.0023288	10.01583562
Floating Interest Payable					.0158356164
Fixed Interest Receivable					.0167808219
Net Receivable for Mutual Fund receiving fixed					.0009452055

In this example Mutual Fund stands to gain by receiving fixed rates. As the NSE MIBOR floating rate is decided daily, in adverse scenario, the Mutual Fund may have to pay the difference.

The counter-party providing Swap, Options, Forward Rate Agreements (FRAs) will do the same at a cost.

Risk factors Interest rate swaps strategy:

Risk Factor: The risk arising out of uses of the above derivative strategy as under:

- Lack of opportunities available in the market.

- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Interest rate swaps require the maintenance of adequate controls to monitor the transactions entered into, the ability to forecast failure of another party (usually referred to as the 'counter party') to comply with the terms of the derivatives contract.

Further the exposure limits for trading in derivatives by Mutual Funds specified by SEBI vide its Circular No. Cir/IMD/DF/11/2010 dated August 18, 2010, SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2021/024 dated March 4, 2021 and SEBI Circular no. SEBI/HO/IMD/IMD-I DOF2/P/CIR/2021/580 dated June 18, 2021 are as follows:

1. The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs), other permitted securities/assets and such other securities/assets as may be permitted by the Board from time to time should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 3.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
6. Mutual Funds may enter into plain vanilla Interest Rate Swaps (IRS) for hedging purposes. The value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.

In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable

7. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 3.
8. Definition of Exposure in case of Derivative Positions

9. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts

II. The risks involved in derivatives are:

1. The cost of hedge can be higher than adverse impact of market movements
2. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
3. An exposure to derivatives in excess of the hedging requirements can lead to losses.
4. An exposure to derivatives can also limit the profits from a genuine investment transaction.
5. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
6. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

III. Methods to tackle these risks:

1. Hedging will not be done on a carpet basis but based on a view about interest rates, economy and expected adverse impact.
2. Limits of appropriate nature will be developed for counter parties
3. Such an exposure will be backed by assets in the form of cash or securities adequate to meet cost of derivative trading and loss, if any, due to unfavorable movements in the market.

IV. The losses that may be suffered by the investors as a consequence of such investments:

1. As the use of derivatives is based on the judgment of the Fund Manager, the view on market taken may prove wrong resulting in losses.
2. The upside potential of investments may be limited on account of hedging which may cause opportunity losses.

V. The use of derivatives for hedging will give benefit of:

1. Curtailing the losses due to adverse movement in interest rates
2. Securing upside gains at cost

VI. VALUATION OF DERIVATIVES

- i. The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the SEBI Regulations.
- ii. The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the SEBI Regulations.

VII. REPORTING OF DERIVATIVES

The AMC shall cover the following aspects in their reports to trustees periodically, as provided for in the Regulations:

- i. Transactions in derivatives, both in volume and value terms.
- ii. Market value of cash or cash equivalents / securities held to cover the exposure.
- iii. Any breach of the exposure limit laid down in the scheme Information document.
- iv. Shortfall, if any, in the assets covering investment in derivative products and the manner of bridging it.

The Trustees shall offer their comments on the above aspects in the report filed with SEBI under sub regulation (23) (a) of regulation 18 of SEBI Regulations.

J. PORTFOLIO TURNOVER

The Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time. The Asset Management Company does not have a policy statement on portfolio turnover. Generally, the Asset Management Company's portfolio management style is conducive to a low portfolio turnover rate. However, given the nature of the Scheme which follows a monthly cycle or rollover / positions the portfolio turnover is expected to be high. Further, there are trading opportunities that present themselves from time to time. These trading opportunities may be due to trading opportunities in equities, changes in interest rate policy by the Reserve Bank of India, shifts in the yield curve, credit rating changes or any other factors where in the opinion of the fund manager there is an opportunity to enhance the total return of the portfolio. It will be the endeavour of the fund manager to keep portfolio turnover rates as low as possible.

Portfolio Turnover Ratio as on March 31, 2023 :0.74

Companies are scored on a scale of 1-100, where 100 is the highest. Under "E" and "S" assessment, the final score is a combination of company scores and sector scores. The company scores assess a company's material parameters within the "E" or "S" pillars in relation to its peers within a sector, whereas the sector scores indicate how the sector fares relative to other sectors on "E" or "S" parameters. Controversial incidents invite a negative scoring or deflator on the "E", "S" or "G" pillar scores. 		Governance is the most highly weighted pillar as SBI FM believes that well governed companies with strong leadership are able to create environmental and social positive value too. SBI FM's ESG rating framework looks at ESG risks based on business activities and the mitigation measures taken by the company to avoid/reduce the impact. This is complemented by controversy tracking and all three components help in arriving at an ESG score. The Responsible Investment Policy explains the process in detail. Further, to achieve diversification the Scheme may also invest residual net assets i.e. up to 35% of the net assets in companies other than Dividend Yielding Companies. The overall endeavour is to construct a portfolio with aggregate dividend yield that is at least 50% higher than that of the Nifty 50 Index. b) IDCW Option

Under this Option, it is proposed to declare IDCW subject to availability of distributable profits, as computed in accordance with SEBI (MF) Regulations. The Trustee reserves the right to declare IDCW under the IDCW option of the Scheme(s) depending on the availability of distributable surplus under the Scheme(s).

The IDCW reinvestment may be cancelled on receipt of a request from the Unit holders for the same. As and when the IDCW is declared by a Scheme, if the payable IDCW amount is less than or equal to Rs. 500/-, the same will be compulsorily reinvested in the respective Scheme(s)/Plan(s)/Option(s) irrespective of the IDCW facility selected by investor. If the IDCW amount payable is greater than Rs. 500/- then it will be either reinvested or paid as per the mandate selected by the investor. Between "Growth" or "IDCW" option, the default will be treated as "Growth". In "IDCW" option between "IDCW Reinvestment", "IDCW Payout" and "IDCW Transfer", the default will be treated as "IDCW Payout". Kindly note that if the IDCW under IDCW Payout sub-option is less than Rs. 250/- then it will be by default reinvested. Investor can select only one option either IDCW pay out or IDCW reinvestment at a Scheme and folio level. Any subsequent request for change in IDCW option viz. IDCW Payout to IDCW Reinvestment or vice-versa would be processed at the Folio / Scheme level and not at individual transaction level. Accordingly, any change in IDCW option (IDCW payout / IDCW reinvestment) will reflect for all the units held under the scheme / folio.

Swing STP

Swing STP is a facility wherein investor can opt to transfer an amount at regular intervals from source scheme of SBI Mutual Fund (SBIMF) to a target scheme of SBIMF including a feature of reverse transfer from target scheme into the source scheme, in order to achieve the targeted market value on each transfer date in the target scheme. This ensures that the market value on each date of the transfer rises by a specified amount at every frequency irrespective of the market price. For example if investor decides that the value of their investment in the target scheme should appreciate by Rs. 1000 per month, then each month investor will invest only to the extent of the shortfall. If appreciation in the target scheme is higher than the target value then this excess value is reverse transferred to the source scheme. Thus the amount to be transferred will be arrived at on the basis of

the difference between the target market value and the actual market value of the holdings in the target scheme on the date of transfer.

Terms & conditions of Swing STP are as follows:

1. Source scheme: All open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.

In case the date of transfer falls on a non-Business Day, the immediate next Business day will be considered for the purpose of determining the applicability of NAV and processing the transaction.

In case on the STP date, the amount (as specified above) to be transferred is not available in the source scheme/plan/option in the investor's folio, the residual amount will be transferred to the target scheme/plan/option and Swing STP will be closed. Investors have an option to consider earlier investments in the target scheme for calculating Swing STP amount. 9. Reverse Transfer: On the date of transfer, if the market value of the investments in the target scheme/plan/option through Swing STP is higher than the target market value (first installment amount X number of installments including the current installment), then a reverse transfer will be effected from the target scheme/plan/option to the source scheme/plan/option to the extent of the difference in the amount, in order to arrive at the target market value. 10. Top-up option: Investor can choose Swing STP based on fixed amount installment and additionally investor has an option to choose top-up option. Under this, investor can indicate an absolute amount or percentage (in annualized terms) by which each installment amount will be increased. Amount of transfer will be calculated by taking into consideration of the target market value (including top-up amount) and actual market value of the investments in the target scheme. a. Amount of transfer: The first Swing STP installment will be processed for the first installment amount specified by the investor at the time of enrollment. From the second Swing STP installment onwards, the transfer amount will be derived by the following formula: In case Top-up amount mentioned as absolute amount: Target market value Minus Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer. D. NAV INFORMATION

NAV of the Scheme shall be computed and declared on every business day. The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto three decimal places as follows or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

NAV will be disclosed under SEBI (Mutual Funds) Regulations, 1996. NAV can also be viewed on www.sbimf.com and www.amfiindia.com.

The AMC shall update the NAVs on the website of Association of Mutual Funds in India - AMFI (www.amfiindia.com) by 11.00 p.m. on the same business day. In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2018 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2018, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

- a. For exit on or before 12 months from the date of allotment – 1.00%
- b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2019; say December 1, 2018, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned}\text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 1\%) = \text{Rs. } 11.988/-\end{aligned}$$

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2019; say April 1, 2019, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned}\text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 0) = \text{Rs. } 12/-\end{aligned}$$

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2018/92 dated June 05, 2018.
